

End-of-Year Smart Savings

Your Annual Opportunity to
Optimise Tooling Performance.

20% off repeat spare part orders and cutting tool
resharpening supplied by Prodieco.
Maintain line performance, preserve tooling integrity,
and prepare for the year ahead.

 Offer valid until **30 November**

Dear Customer,

To support the ongoing performance of your blister packaging lines, we are offering an exclusive **20% discount** on repeat spare part orders and cutting tool resharpener, available only for components previously supplied by Prodieco.

This limited-time offer is designed to help you:

- ✓ **Extend Equipment Life:** Replace worn components to maintain performance, minimise unplanned downtime, and ensure your spare parts inventory is ready for the year ahead.
- ✓ **Improve Production Efficiency:** High-precision regrinds and punch tools deliver sharper, more consistent results.
- ✓ **Maximise Tooling Value:** Extend the lifespan of critical parts with precision-engineered reworks and replacements.
- ✓ **Rely on Expert Support:** Our technical teams ensure seamless integration with your existing blister line setup.

All services are supported by Prodieco's integrated operations in Europe and the USA, ensuring quality, speed and global support.

See next section for eligible components →

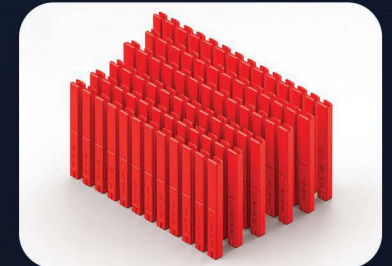

20% Savings on Precision Components Supplied by Prodieco

1. Tube Feeding

High-durability filling tubes engineered to deliver consistent product feeding, reduce blockages, and improve operational flow.

2. Form Pins

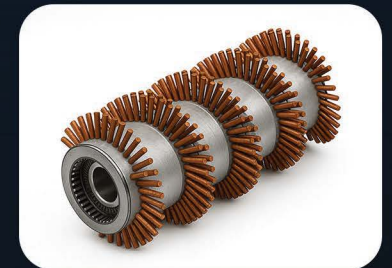

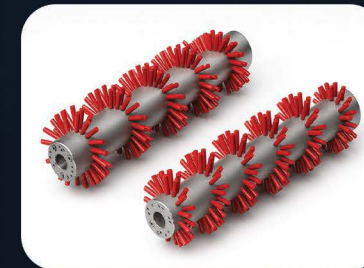

Precision-engineered to maintain optimal blister formation and ensure consistent, high-quality packaging.

3. Brushes

Web Cleaning & Brush Box

Keep your lines running smoothly with precision brushes that ensure consistent product flow and long-lasting performance.

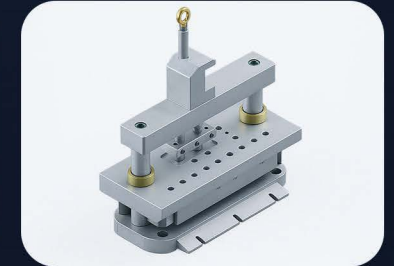

20% Savings on Precision Components Supplied by Prodieco

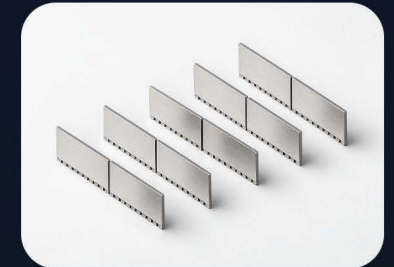

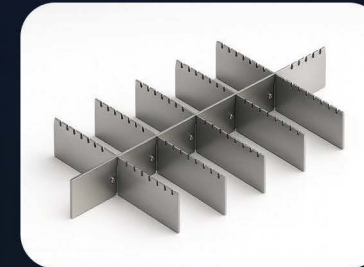

4. Punch Tools/Regrinds

Extend the life of your tooling with sharp, precise punches, ensuring accurate cuts and optimised performance.

5. Perforation Blades

Maintain sharpness for clean, accurate perforations, reducing waste and improving efficiency in the packaging process.

6. Preheating Plates & Sealing Rollers

Designed for optimal heat transfer, ensuring even material distribution and consistent forming quality.
